A Love Affair with the Sun

Crystal Heart Garden is located in the warmest place in Taiwan — Hengchun.

It has had the exclusive privilege of enjoying glorious sunshine since the day it was born.

The photovoltaic (PV) panels, against the tranquil backdrop of the emerald sea and the blue sky, perpetually create clean and natural electric energy.

Taipower Crystal Heart Garden

It is the first "BIPV (Building Integrated Photovoltaic System)" solar energy demonstration system. It was constructed based on the image of a wafer, the basic element of a PV panel. Wearing a high-tech overcoat made of 196 pieces of poly crystalline silicon and 200 pieces of single crystal silicon, it can generate up to 50KWP of electricity.

By 2011, the total installed capacity of Taipower's PV system will be 10 MW. It is expected that the total energy production will reach 12 million KWh/year, and the CO₂ emissions will be reduced by 8,375~12,325 tons/year.
